

Participant Recruitment

School of Medicine, Dentistry and Health Sciences

Department of Audiology and Speech Pathology

THE UNIVERSITY OF
MELBOURNE

Project: SpeechATAX: Intensive home-based biofeedback driven speech treatment for hereditary ataxia

Important Information:

- Participants with a confirmed diagnosis of **hereditary ataxia** are required for a speech pathology research project.
- The SpeechATAX program is designed to improve vocal control, prosody (intonation) and overall intelligibility of speech in people with hereditary ataxia.
- The treatment is 30-45 mins, 5 days/week for 4 weeks, conducted at home on a tablet. Participants will receive support from a speech pathologist.
